

Muhammad Mughira Asad

Full Stack AI Engineer

Full Stack AI Engineer specializing in React.js, Node.js, FastAPI, AI agents, and RAG-based systems. Experienced in building scalable web applications, intelligent automation pipelines, and end-to-end AI solutions - from model integration to production deployment.

EDUCATION

BS Computer Science

NUML, Multan
2023 - 2027

WORK EXPERIENCE

Software Engineer

Softsuit tech
April 2026 – Present
Tasks

- Built and maintained full-stack features across React.js and Node.js applications, collaborating within an agile development workflow.
- Designed and integrated RESTful APIs to enable seamless communication between frontend and backend systems.
- Optimized PostgreSQL and MongoDB schemas for improved data reliability and query performance.
- Contributed to AI-powered features, integrating RAG-based pipelines to enable context-aware, intelligent functionality.

AI Developer – PneumoFusion

NUML University
Jan 2026 – Present
Tasks

- Building a multimodal AI system for pneumonia diagnosis using X-ray imaging and clinical data.
- Trained deep learning models with PyTorch and TensorFlow for accurate, real-time predictions.
- Developed FastAPI backend with Node.js/Express for authentication and API services.
- Integrated a RAG-based chatbot into the frontend for real-time patient query support and information retrieval.

TECHNICAL SKILLS

- Languages: Python, JavaScript, PHP, C++
- Frontend: React.js, Three.js, TailwindCSS
- AI/ML: PyTorch, Scikit-learn, Pandas, Data Preprocessing
- Backend: Nodejs, Expressjs, FastAPI, Flask
- Databases: MySQL, PostgreSQL, MongoDB
- Deployment: Vercel, Render, huggingface, Railway
- Tools: n8n, docker desktop, Git/GitHub

CERTIFICATIONS

- Databricks SQL and Lakehouse Analytics – Simplilearn
- Python for Data Science – IBM
- Business Communications – HP LIFE

LIVE PROJECTS

▪ PneumoFusion – AI Diagnostic System

Link: [Pneumofusion](#) | FastAPI, MERN, PyTorch

- AI-powered diagnostic system for chest X-ray analysis and pneumonia detection, achieving 94.55% model accuracy.
- FastAPI backend integrated with a MERN stack frontend and PyTorch deep learning model for real-time predictions.
- Combines medical imaging with clinical data for a multimodal diagnostic approach.

▪ Portfolio Website – React + Three.js

Link: [Portfolio](#) | React

- Modern portfolio featuring interactive 3D elements and smooth motion animations, built with React.js .
- Styled with TailwindCSS for a clean, fully responsive layout across all devices.
- Optimized performance and smooth scroll interactions using Framer Motion for enhanced user experience.
- Deployed on Vercel with global CDN for fast, reliable delivery.

GITHUB PROJECTS

▪ BotForge – AI Chatbot Platform (React / Node.js)

- Full-stack AI chatbot platform built with React, Node.js, Express, PostgreSQL, and Google Gemini — turns any website into a smart conversational assistant with no coding required.

▪ AI Automation Agents (n8n)

- Built AI-powered automation agents using n8n and Ollama, integrating local LLMs for privacy-focused workflows.
- Developed RAG pipelines with document processing and real-time automation, enabling context-aware responses without relying on cloud-hosted models.

▪ Text-to-Image Generator (CPU-Based)

- Built a Text-to-Image Generator using FastAPI and Stable Diffusion v1.5, running entirely on CPU with no GPU required.
- Converts text prompts into AI-generated images via a clean web interface with automatic model download.

▪ T-Shirts Store (Laravel)

- Full-featured e-commerce website built with Laravel MVC, featuring a dark UI and full mobile responsiveness.
- Includes product listings, WhatsApp order integration, secure authentication, and password hashing.
